INFORMATION

"Information is that which allows you to make a correct prediction with accuracy better than chance."

Adami, Christoph. "What Is Information?" Philosophical Transactions of the Royal Society A: Mathematical, Physical and Engineering Sciences, vol. 374, no. 2063, Mar. 2016, p. 20150230, https://doi.org/10.1098/rsta.2015.0230.

"Information is that which allows you to make a correct prediction with accuracy better than <u>chance</u>."

Adami, Christoph. "What Is Information?" Philosophical Transactions of the Royal Society A: Mathematical, Physical and Engineering Sciences, vol. 374, no. 2063, Mar. 2016, p. 20150230, https://doi.org/10.1098/rsta.2015.0230.

defining and measuring information

guess the number am I thinking of!

what is the most efficient approach?

is it > 8?

1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 X

is it > 8? ×

1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16

is it > 8? × is it > 4?

is it > 8? × is it > 4? ✓

is it > 8? is it > 4? is it > 6? ✓

is it > 8? × is it > 4? ✓ is it > 6? ✓

is it > 8? × is it > 4? √ is it > 6? √ is it > 7?6 7 8 10 11 12 13 14 15 16 1 **3** 4 **(9**) 2 5 00

is it > 8? × is it > 4? \checkmark is it > 6? \checkmark is it > 7? ×

is it > 8? × is it > 4? \checkmark is it > 6? \checkmark is it > 7? ×

with 4 questions from 16 to 1

is it > 8? \times is it > 4? \checkmark is it > 6? \checkmark is it > 7? \times 0

with 4 questions from 16 to 1

N = 16

N = 16 N = 8

information = reduced uncertainty uncertainty is measured with the logarithm of N

 $H = log_2(N)$

or: how often can we cut the remaining possibilities in half?

 $H = log_2(N)$

$\overline{H_0} = log_2(16) = 4$

$\overline{H_1} = \overline{log_2(8)} = 3$

 $I=log_2(\overline{16})-\overline{log_2(8)}$

uncertainty and information are measured in **bits** how many yes/no questions to reduce uncertainty to zero?

 $H=0=log_2(1)$

how many yes/no questions to reduce uncertainty to zero?

 $egin{aligned} H &= 0 = log_2(1) \ H &= log_2(N) \end{aligned}$

poker

which card am I holding?

52 card poker deck

52 possible cards

is the card black?

is the card black?

no

is the card black?

no

is it hearts?

is the card black? no is it hearts?

yes

is the card black? no is it hearts? yes

is it 8 or above?

is the card black? no is it hearts? yes is it 8 or above? yes

is the card black? no is it hearts? yes is it 8 or above? yes

is it jack or above?

is the card black? no is it hearts? yes is it 8 or above? yes is it jack or above? yes

is the card black? no is it hearts? yes is it 8 or above? yes is it jack or above? yes

is it queen or above?

is the card black? no is it hearts? yes is it 8 or above? yes is it jack or above? yes is it queen or above? yes

is the card black? no is it hearts? yes is it 8 or above? yes is it jack or above? yes is it queen or above? yes is it king?

3 A 5 2 7 d 4 6 K 8 9 10 J Qd 2 3 5 6 Α 7 4 K 8 9 10 Q J A 2 3 5 6 4 7 K 8 Q 9 10 J A 2 3 5 6 4 7 K 8 9 10 J Q

is the card black? no is it hearts? yes is it 8 or above? yes is it jack or above? yes is it queen or above? yes is it king?

no

with 6 questions from 52 to 1

uncertainty with N = 52 possibilities?

 $H = log_2(52) pprox 5.7$

uncertainty with N = 52 possibilities?

one bit of information with each answer...

$log_2(52) - log_2(26) = 1$

one bit of information with each answer...

$log_{2}(52) - log_{2}(26) = 1$

...that cuts the remaining options in half

no

how much information?

how much information?

 $egin{aligned} H_0 &= log_2(52) pprox 5.7 \ H_1 &= log_2(39) pprox 5.29 \end{aligned}$

how much information?

 $egin{aligned} H_0 &= log_2(52) pprox 5.7 \ H_1 &= log_2(39) pprox 5.29 \ H_0 - H_1 pprox 0.41 \end{aligned}$

how much information?

 $egin{aligned} H_0 &= log_2(52) pprox 5.7 \ H_1 &= log_2(39) pprox 5.29 \ H_0 - H_1 pprox 0.41 \end{aligned}$

that's less than 1 bit

chess

$$c2 \rightarrow c4$$

$$c2 \rightarrow c4$$

$$c2 \rightarrow c4$$

$$\begin{array}{c} c2 \rightarrow c4 \\ c5 \rightarrow d3 \end{array}$$

$$\begin{array}{c} c2 \rightarrow c4 \\ c5 \rightarrow d3 \end{array}$$

$c2 \rightarrow c4$

how many possibilities?

64 fields x 64 fields

how many possibilities?
$64 \times 64 = 4096$

possible moves*

*disregarding impossible moves

$64 \times 64 = 4096$

$\overline{H} = log_2(4096) = 12$

$64 \times 64 = 4096$

$H = log_2(4096) = 12$

one chess move is 12 bits of information

an alternative way to calculate # bits

4 digits

4 digits8 possible symbols per digit

4 digits 8 possible symbols per digit how many bits per digit?

4 digits 8 possible symbols per digit how many bits per digit?

$$H_{digit} = log_2(8) = 3$$

4 digits 8 possible symbols per digit how many bits per digit?

$$egin{aligned} H_{digit} = log_2(8) = 3 \ H_{move} = log_2(8) imes 4 = 12 \end{aligned}$$

$H_{avg} = log_2(S) imes n$

S: number of possible symbols *n:* number of digits in our message

 $H_{max} = \lfloor log_2(S) \rfloor \times n$

when calculating bits for storage, we must always consider the worst case

digits and # symbols
