LOGIC AND ARITHMETIC

logic gates are the parts a computer is made of.

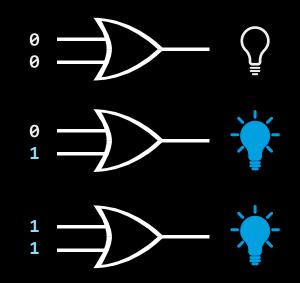

combined in the right way, they enable the basic arithmetic operations a computer can do: add, subtract, divide, and multiply.

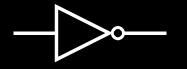

AND	0	1
0	0	0
1	0	1

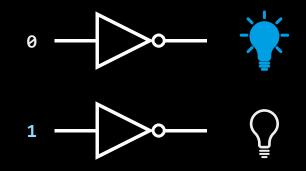

OR	0	1
0	0	1
1	1	1

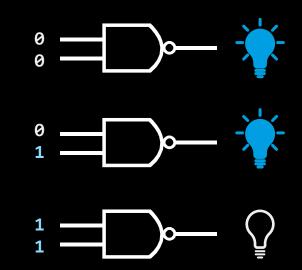

ΝΟΤ	0	1
	1	0

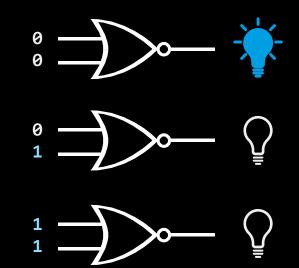

NAND	0	1
0	1	1
1	1	0

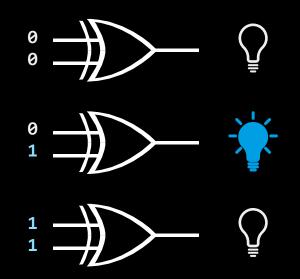

NOR	0	1
0	1	0
1	0	0

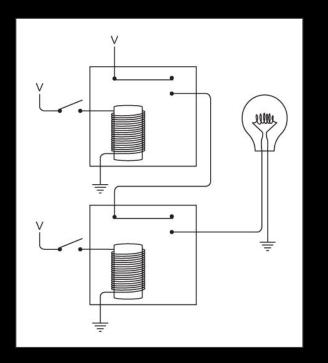

XOR	0	1
0	0	1
1	1	0

binary addition

when you come right down to it, addition is just about the only thing that computers do.

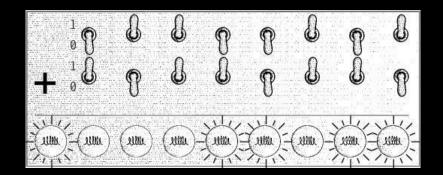

if we can build something that adds, we're well on our way to building something that uses addition to also subtract, multiply, divide, calculate mortgage payments, guide rockets to Mars, play chess, and foul up our phone bills.

(Charles Petzold)

an 8-bit binary adding machine

an 8-bit binary adding machine

maximum result:

255 + 255 = 510

OR

1 1111 1110

1 1 1 0 + 1 0 1 0

 $1 \ 1 \ 1 \ 0$ $+ \ 1 \ 0 \ 1 \ 0 \ 0$ $1 \ 0 \ 0 \ 0$

0	0	1
1	1	0

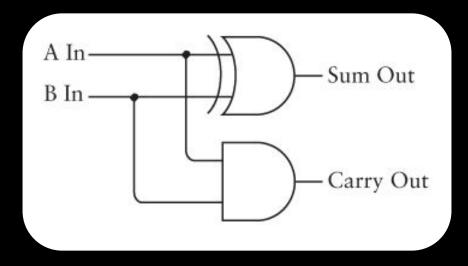

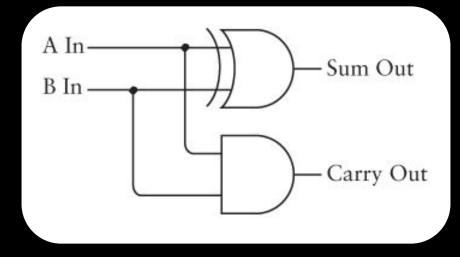

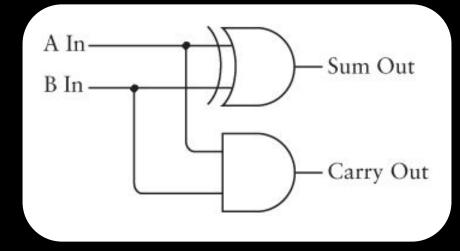

bits A and B are inputs

XOR gate computes sum bit

bits A and B are inputs

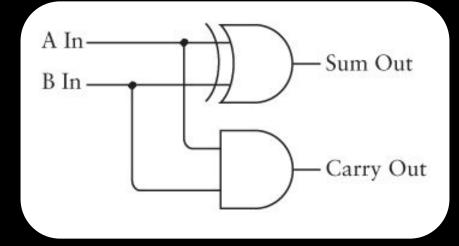

XOR gate computes sum bit

AND gate computes carry bit

half adder

bits A and B are inputs

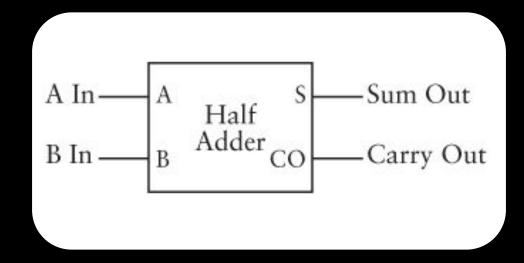

XOR gate computes sum bit

AND gate computes carry bit

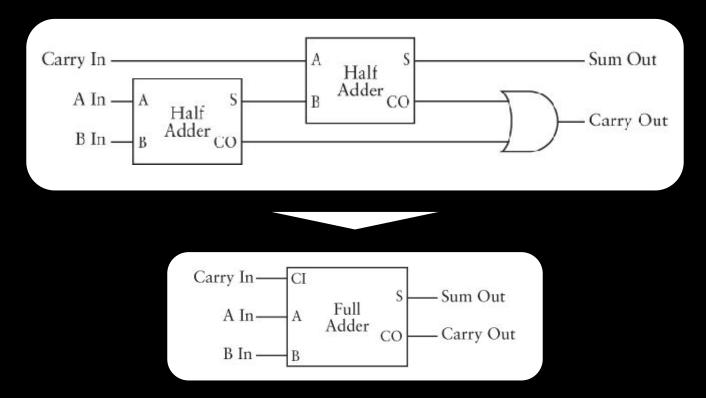

half adder

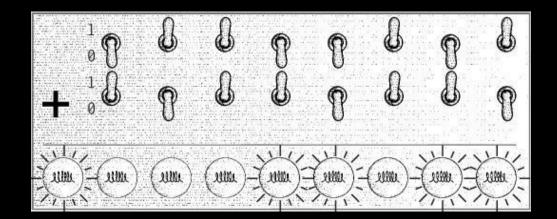

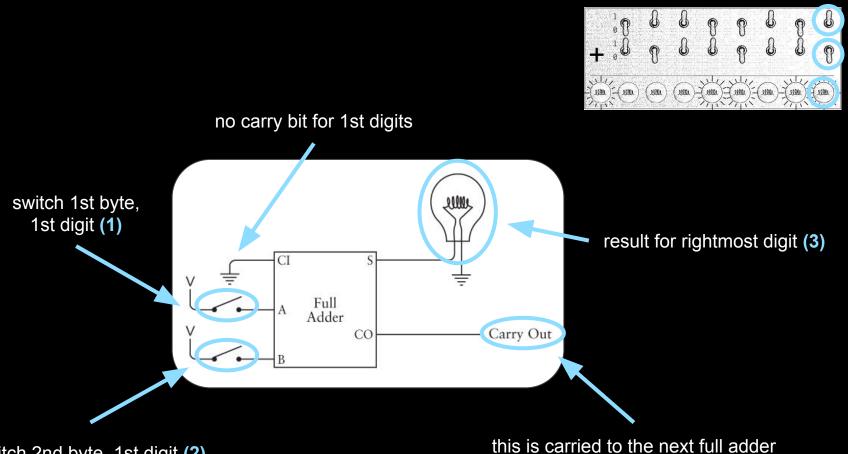

the half adder has no input for a carry bit.

two half adder wired together make a full adder.

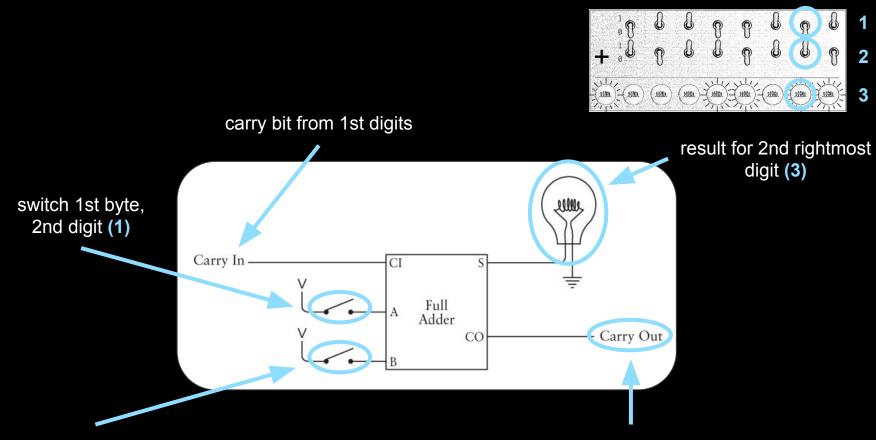

so how to build this?

switch 2nd byte, 1st digit (2)

switch 2nd byte, 2nd digit (2)

this is carried to the next full adder
